the 1990s, the industry has been hit hard by a combination of factors. The most significant of these is the decline in the number of people working in the industry. This has been caused by a number of factors, including the fact that many people have left the industry to pursue other careers, and the fact that many people have retired. Another major factor is the decline in the number of people working in the industry. Abstract—The purpose of this study was to determine the effect of a 10-week, 100-hr, nonclinical, laboratory-based, and clinical experience program on the self-reported confidence of dental students in their ability to perform various dental procedures. The study was conducted at a dental school in the United States. The students were divided into two groups: a control group and an experimental group. The experimental group completed the 10-week program, while the control group did not. The students completed a self-reporting questionnaire at the beginning and end of the program. The results showed that the experimental group had significantly higher self-reported confidence in their ability to perform various dental procedures compared to the control group. The results suggest that the 10-week program is effective in increasing the self-reported confidence of dental students in their ability to perform various dental procedures.
