

The first part of the book is devoted to the study of the Earth's structure and the processes which take place in its interior. It is divided into two main sections: the first deals with the general principles of the theory of the Earth, and the second with the details of the various processes which take place in the interior of the Earth.

The second part of the book is devoted to the study of the Earth's surface and the processes which take place on it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's surface, and the second with the details of the various processes which take place on the surface of the Earth.

The third part of the book is devoted to the study of the Earth's atmosphere and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's atmosphere, and the second with the details of the various processes which take place in the atmosphere of the Earth.

The fourth part of the book is devoted to the study of the Earth's hydrosphere and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's hydrosphere, and the second with the details of the various processes which take place in the hydrosphere of the Earth.

The fifth part of the book is devoted to the study of the Earth's biosphere and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's biosphere, and the second with the details of the various processes which take place in the biosphere of the Earth.

The sixth part of the book is devoted to the study of the Earth's geosphere and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's geosphere, and the second with the details of the various processes which take place in the geosphere of the Earth.

The seventh part of the book is devoted to the study of the Earth's lithosphere and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's lithosphere, and the second with the details of the various processes which take place in the lithosphere of the Earth.

The eighth part of the book is devoted to the study of the Earth's crust and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's crust, and the second with the details of the various processes which take place in the crust of the Earth.

The ninth part of the book is devoted to the study of the Earth's mantle and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's mantle, and the second with the details of the various processes which take place in the mantle of the Earth.

The tenth part of the book is devoted to the study of the Earth's core and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's core, and the second with the details of the various processes which take place in the core of the Earth.

The eleventh part of the book is devoted to the study of the Earth's outer space and the processes which take place in it. It is divided into two main sections: the first deals with the general principles of the theory of the Earth's outer space, and the second with the details of the various processes which take place in the outer space of the Earth.
